## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,4-6,7,11,17-19,21,29 & 31 rejected under 35 U.S.C. 102(b) as being anticipated by Rajasubramanian et al (#5,890,371). Rajasubramanian et al, discloses an enclosure that houses heat producing equipment such as a microwave repeater station or electronic equipment and comprises: a heat exchanging system (12), an enclosure (20), a DC power source (19), a thermoelectric system (30) that receives input power, a temperature sensor (36) the measures temperature of air in enclosure, a temperature control system (14) and a battery (60).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3,10 and 30 rejected under 35 U.S.C. 103(a) as being unpatentable over Rajasubramanian et al in view of Sundhar (#6,453,678). Rajasubramanian et al discloses the claimed invention as stated above but lacks and insulated enclosure having a solar panel that maintain battery charge energy .Sundhar teaches a DC battery

with a thermoelectric chip and a solar panel that covers a portion of enclosure and provides solar energy. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the cooling enclosure as discloses by Rajasubramanian et al with a solar panel as taught by Sundhar for the mere purpose of providing rechargeable energy for the DC battery power source.

***Allowable Subject Matter***

Claim 8, 9, 12-16, 20, 22-28 & 32 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
